4**. Lewis, Brittany**, Padi, Manisha, 2025, **"Regulating Secondary Loan Markets: Evidence from Small Business Lending"** ***(Revise and Resubmit at Journal of Financial Economics)***

Rules governing the structure of securitized loan pools can shift lenders' relative cost of pooling different loans, reallocating access to capital. Utilizing novel data on government-backed loan securitization, we study the impact of tightening secondary market regulation on loan characteristics, using an instrumented difference-in-differences approach. Reform exposure decreases secondary market sale prices, and results in shorter maturities and lower loan defaults. The reform reallocates capital away from industries needing long-term capital investments, causing real economic effects. Our results suggest that making loans more similar within securitized pools can restrict access to capital for more costly or hard-to-pool loan types.

5**. Lewis, Brittany**, Padi, Manisha, Wang, Xiyu, Wang, Zhongyu 2025, **"The Cost of Servicing Debt Pools"**

Mortgage servicers face highly variable costs and depend on servicing fees for compensation. We demonstrate that the majority of servicing fees are uniform across securitized loan pools, consistent with average cost pricing. We calculate a risk based break-even servicing fee for each loan and document significant mispricing, which potentially distorts servicers' foreclosure incentives. Utilizing quasi-random assignment of loans to pools, we establish that higher mispricing increases borrower foreclosure rates and decreases investor returns, with more severe distortions in heterogeneous pools. A theoretical welfare framework comparing uniform versus variable fee regimes shows that investor losses are small relative to borrower losses.

I study how, when the borrower is a financial intermediary, increasing collateral value — by strengthening creditor rights on collateral backing warehouse funding — spurs downstream lending product innovation, stimulating credit demand, and longer-term effects. Exploiting BAPCPA 2005 causally isolates increased collateral value's effect on downstream lending innovation. More exposed regions receive increased alternative mortgages with lower documentation and initial-payment-to-balance ratios, crowding out government mortgages and expanding, then contracting, mortgage demand. More exposed regions experience increased payment shocks on resetting mortgages, degraded loan performance, amplified home price cycles, and adverse labor market outcomes — especially among minority borrowers.

7. Dalgic, Husnu, **Lewis, Brittany**, Modena, Andrea, 2026 **"Pledgeable Collateral, Dealer Leverage, and Runs"**

We show that strengthening creditor rights in the sale and repurchase (repo) market can exacerbate financial instability, particularly under short debt maturities and low collateral volatility. We build a model of financial intermediaries that raise financing by pledging collateral in the repo market. In the short term, increasing collateral pledgeability makes repo creditors safer and reduces debt rollover risk; however, it also expands long-term debt capacity and leverage, ultimately heightening run risk. This instability is a distinct feature of

environments with long-term liabilities and low volatility assets, where market discipline fails to constrain post-policy leverage. We test our model's predictions by exploiting the 2005 BAPCPA bankruptcy reform, which expanded creditor protections via repo safe harbors. Using hand-collected data on dealer repo collateral, we confirm that while the law enhanced collateral pledgeability, it fueled short-term leverage and precipitated sharper de-leveraging during the downturn.
